

FIRE SAFETY MANUAL

FIRE RESPONSE MANUAL. Structure fires: first-due engine within 8 minutes for 90% of calls. Working fire (visible flame, occupied structure) requires 3 engines, 1 ladder, 1 rescue, and a battalion chief. Persons-reported fires escalate to CRITICAL severity and dispatch an additional ambulance. Industrial-zone fires require the hazmat unit on the first alarm. Wind above 30 km/h with humidity under 30% raises the citywide fire risk index; open burning is prohibited and brush patrols are doubled.
