

HOSPITAL SURGE PROTOCOL

HOSPITAL SURGE CAPACITY PROTOCOL. Occupancy above 85% triggers surge review; above 90% the hospital must activate surge mode: discharge-ready patients are processed within 4 hours, elective procedures are postponed, and the city bed-management cell redirects non-critical ambulance traffic to the nearest hospital under 80% occupancy. ICU overflow pairs: AIIMS Delhi <-> Fortis Noida; Medanta Gurugram -> AIIMS Delhi; Lilavati Mumbai <-> KEM Mumbai; Manipal Bengaluru <-> St. John's Bengaluru. Mass-casualty incidents trigger the START triage protocol; each receiving hospital reports bed status every 30 minutes to the EOC.
